

ZK/XK CABRIO SERIES

Super 35 cinema zoom lenses, purpose-built for maximum versatility

SEAMLESSLY INTERCUT WITH THE HIGHEST LEVEL PRIME LENSES

High MTF from corner to corner across all focal lengths with a natural and neutral colour, the 'look' matches perfectly with many current line-ups of prime lenses.

BALANCING HIGH PERFORMANCE WITH COMPACT SIZE AND WEIGHT

Using zooms maximises usability and minimises lens changes. Slower T-stops than the FUJINON Premier range enable the Cabrio lenses to be much smaller and lighter, while still delivering exceptional results.

REMOVABLE DRIVE UNIT

All Cabrio lenses come with a removable drive unit, allowing them to be used in different shooting set-ups, such as on the shoulder for maximum versatility in the field or on sets.

GLOBALLY RECOGNISED

FUJINON Cine lenses have captured stunning images in countless award-winning popular films including *Avatar* (Mauro Fiore, ASC); *First Man* (Linus Sandgren, ASC, FSF); *Churchill* (David Higgs, BSC); *Men in Black: International* (Stuart Dryburgh, ASC); and *Beauty and the Beast* (Tobias Schliessler, ASC).
